

Grow the Merchant (Frontend Design)

A refined, animated merchant console. Judges see exactly where the merchant sets limits, builds campaigns and approves AI actions — modern, red & white, live feelings.

Red = organic AI-assisted · Green = AI-generated

Autonomy level

Current

L2 — Auto low-risk

Raises only what the AI may propose; never its money limits.

Change level

G1 · Merchant Overview (live)

"Live" pulse + a float-in toast ("reconciled after a timeout") show the system is real-time and self-healing.
Enter: the Change level button; KPIs + AI-generated attribution chip are read-only.

app.aegispay.com/merchant/catalog

AegisPay

Dashboard

Catalog — what AI buyers can see

+ Add product

Everything here becomes the agent-readable catalog. Prices are server-owned; descriptions are data, never instructions.

Catalog

Agents

Opportunities

Campaigns

Approvals

Analytics

PRODUCT	CATEGORY	PRICE	STOCK	AI-SAFE SUMMARY	ACTION
Runner Pro · SKU RS-BLK-42	shoes/running	₹3,499	56	Running shoe, mesh upper, neutral cushioning	Edit
Run Sock 3-pack	apparel/socks	₹499	120	3-pack cotton socks, breathable	Edit
Sport Bottle	gear/bottles	₹799	10	unsafe · blocked from AI auto-buy	Edit

G2 · Catalog builder

Enter: "+ Add product" opens name, SKU, category, price (minor units), stock, agent-safe summary.

See: the red **unsafe** tag on a product whose text looked like an instruction — excluded from autonomous AI buying (animation note: the tag and rows have soft hover motion).

Add product

merchant input

A

This is where the merchant types in a new product. Once saved it becomes agent-readable; the price is owned by the merchant only.

Product name

SKU

Runner Pro 42

RS-BLK-42

Category

Price (₹, minor units)

shoes/running

349900

Stock

Available to AI buyers

56

Yes

Agent-safe summary (no marketing instructions)

Running shoe, mesh upper, neutral cushioning, daily use.

The AI can only read this safe summary — it is **data, never instructions.**

Save product

Cancel

G2b • Add product (merchant enters the item)

Enter: name, SKU, category, **price in minor units** (₹349900 = ₹3,499), stock, availability, and the agent-safe summary.

Why it matters: the price is merchant-owned and read-only to AI; the summary keeps the catalog safe from prompt injection.

Agents & autonomy

+ New agent

AGENT	TYPE	TRUST	ALLOWED TOOLS	SPEND LIMITS	STATUS
shopping-agent v3	AI buyer	High	search, recommend, cart, checkout	₹2,000/txn · ₹10,000/day	ACTIVE
growth-agent v1	Growth	High	recommend, campaign (capped)	budget cap only	ACTIVE

Autonomy dial (per agent):

L2 · Auto low-risk

G3 • Agents & autonomy

Enter: "+ New agent" → type, trust, allowed tools, spend limits, and the **L0–L4** dial.

Key rule: raising autonomy only lets the AI propose more; money limits and policy are fixed and can't be changed by the AI.

AI suggested campaign

suggested by growth-agent v1

The **growth agent** drafted this from real affinity. It's a **suggestion** — you confirm, edit, or reject. It cannot run by itself.

Why this offer?

34% of buyers who bought **Running Shoes** also bought **Running Socks** (last 90 days · affinity 0.34 · confidence 0.81).
Estimated uplift: **+3% to +8%** (a range, not a promise)

Offer name

Runner + Socks cross-sell (AI)

Discount (%)

Accept & send for approval

Edit before sending

Reject this idea

G4b · AI suggests a campaign (merchant decides)

The AI pre-fills the offer, discount, budget, duration and target from real affinity, plus an honest uplift range.
Enter: **Accept & send for approval**, **Edit** any field, or **Reject**. Nothing runs until a merchant lets it.

Policies & limits

policy_v12

+ New version

Deterministic, versioned, immutable after publish. Only a **policy_admin** can edit — never the AI.

RULE	VALUE
Per-transaction limit	₹3,000
Daily limit (per agent)	₹10,000
Allowed categories	food, grocery, household
Human approval above	₹2,000
Blocked categories	alcohol, tobacco
Allowed hours	08:00 – 22:00

G7 • Policies & limits

Enter: the caps — per-txn, daily, categories, human-approval threshold, hours.
See: version **policy_v12** and "+ New version". Every change is recorded; rollback is a version switch.
