

AegisPay — Build Errors & How We Solved Them

Git Error aur uske Solution. Har naye error neeche add karo (points 4 ko chhuno)

PDF dobara banane ke liye: `python pdf/build_error_guide_pdf.py`

1. Docker app: ModuleNotFoundError: No module named 'api'

- Error: app container crash loop — No module named 'api'.
- Problem: Build context api/ tha, lekin package repo root par hai; `COPY . .` se modules /app mein flat ho gaye aur import api fail.
- Fix: Context = repo root, aur `COPY api ./api` kar phir `pip install`.

2. Migration: connection to server at "db" ... Connection refused

- Error: db_migrate started before Postgres ready; connection refused, exit 2.
- Problem: db par koi healthcheck nahi tha; race condition.
- Fix: db healthcheck add karo + `depends_on: db: condition: service_healthy`.

3. Migration: fe_sendauth: no password supplied

- Error: psql se no password supplied.
- Problem: TCP par password required tha, container mein PGPASSWORD nahi tha.
- Fix: PGPASSWORD: aegispay env mein set karo (+ `ON_ERROR_STOP=1`).

4. Localstack: exit code 55 ... License activation failed

- Error: LocalStack quit, "No credentials / license".
- Problem: localstack: latest ab auth/license maangta hai.
- Fix: Free OSS image pin karo — `localstack/localstack:3.5.0`.

5. Docker build: pip ... ReadTimeoutError ... pythonhosted

- Error: Image build mein pip download timeout.
- Problem: Default pip timeout chota tha, network slow.
- Fix: Dockerfile mein `PIP_DEFAULT_TIMEOUT=120 + --timeout 120`.

6. CI test: '_IncludedRouter' object has no attribute 'path'

- Error: Smoke test fail — 1 failed, 40 passed.
- Problem: Test app.routes par route.path padh raha tha; FastAPI 0.141.1 (latest) internal _IncludedRouter deta hai. Local had 0.135.2 -> local pass, CI fail.
- Fix: `app.openapi()["paths"]` use karo (stable). FastAPI pin: `>=0.115, <0.142`.

7. PDF renderer: saw instead of expected </i>

- Error: ReportLab parse error while rendering inline code/emphasis.
- Fix: Code spans ko placeholder se replace karo (pehle), phir bold/italic, phir restore.

8. PDF build: ModuleNotFoundError: No module named 'pdf'

- Error: `python pdf/build_x.py` chalane par pdf module nahi mila.
- Fix: Script ke top par repo root `sys.path` mein add karo:
`sys.path.insert(0, str(Path(__file__).resolve().parents[1]))`.

Naya error yahan add karo (template)

```
## N. <short error title>
- **Error:** <paste error>
```

- ****Problem:**** <why it happened, 1-2 lines>
- ****Fix:**** <what we changed>
